

The scales are Photo etched into a glass reticule which is placed in actual contact with the measured object, thus obtaining simultaneous enlarged images in the scale and measured object. Highly accurate measurements are thus obtained. Can be used also as a high grade magnifier.

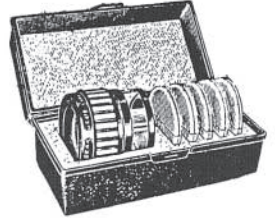

13 types of glass reticules as shown are available.

These are interchangeable in the screw mount on the bottom unit. With them, measurements of diameter, radius, angle and thickness can be made.

Illuminator only for 83/1070. With this unit our 7 x Measuring Eye Glass can be made into a self contained illuminated measuring magnifier.

Code 83/1080
(2 x 1.5V batteries required)

Lupe

The new STEINHEIL LUPE series, consisting of lupes with a magnifying power of 7x, 10x, 14x, and 20x respectively, have been designed for use of these high grade magnifiers. The cemented lens block is mounted on a lightweight barrel made of black plastic, and a sliding frame of the same material covers and protects both lens surfaces from dust and mechanical damage. In the working condition, the frame is opened to form a convenient handle for gripping the loupe.

The new series of lupes can thus be recommended to fans of Steinheil magnifiers who have been hesitating the daily use of them because of their weight and for fear of damaging them.

LIGHT LUPE 10x

Magnification: 10x
 Dimensions: 35 x 44 x 137 mm
 Weight: 100gr
 Battery: 2 x 1.5V (not supplied)

The Verdict Lupe Series, now well accepted for its excellent magnifying power both at the workshop and in the home, has recently been expanded with a new addition-Verdict Light Lupe 10x. An excellent magnifier which is widely used for its magnification, field of vision and reasonable price. The new unit features a built-in lighting device that works from a pair of UM-2 1.5-volts batteries. Powerful, convenient and light weight, the flash light is made of brass and the crystal clear lens is shielded by a hard plastic holder.

Claiming an excellent function and smart appearance, the Verdict Light Lupe 10x is a complete solution to the trouble we have often met in using a conventional magnifier in a dim place. Of course, since the new unit absorbs a sufficient amount of light it need not depend on the lamp in a bright place.
